

Water Reservoir

RTH : Arboretum (forest campus)

RTH : Biopores park

Campus road, garden, and green space

Green Parking Area Using Paving Block

Parking area

Water reservoir (Cekdam)

Retention ponds area

Retention ponds

Description:

The Jatinangor campus of Universitas Padjadjaran (Unpad) has several open spaces. These open spaces consist of the green open space (RTH) and the non-green open space (RTNH) with a ratio of open space to the total area is approximately 88.74%.

- RTH on the Unpad Jatinangor Campus is divided into two clusters, namely cluster I and cluster II. The first one is the campus forest area, whereas the second is the area for planting vegetation. The campus forest area is divided into three main locations, such as Arboretum forest, Kemiri Garden, and Mahogany Garden. On the other hand, the vegetation planting area consists of green roads, campus gardens that are scattered in each faculty and public facility, as well as the green parking area using paving blocks.
- RTNH at the Jatinangor Campus consists of a pavement area and a water body. The pavement area consists of the road, a paved parking lot, and a sports field (basketball). The water body consists of a reservoir situated at the north of the rectorate building (2 hectares), a basin in the southern part of the arboretum (0.8 hectares), and 5 retention ponds that spread over five locations.
